Hi Gatsby!

I'm Zack – self-taught Javascript developer, film photographer, and former builder of buildings. I want to work for a fully distributed team building a technology I truly believe in. I've now built 4-5 Gatsby sites and am absolutely sold on Gatsby as a platform. I think JAMstack and serverless functions are the future of the web, and I want to be a part of that history.

In short, I would love nothing more than to work for you guys.

I have experience across the Javascript stack with the last 3 years focused specifically on React, Node, and all things AWS. I'm a senior frontend developer with Inboxlab, a builder of brands in the games and travel space. In my time there I've built 14 client-facing applications (MERN stack) including:

https://www.thediscoverer.com (110k daily users)
https://www.traveltrivia.com (304k daily users)
https://www.seeqr.com (24k daily users)

I've also recently launched a couple personal projects as well (both using Gatsby, of course):

https://allourformerselves.com
https://allexadalessio.com

As for setting – I've been remote from the start in my current role and am already set up with a dedicated home office and gigabit connection here in Atlanta, GA.

Hope to hear from you soon!

Thank you,

Zack Creach
